

HIGH SPEED SESSION MANAGEMENT adds Efficiency to Reliability on the TECHNOLAS[®] Excimer Workstation 217P

Munich, Germany, September 13, 2011 - Technolas Perfect Vision GmbH (TPV) announces the launch of the new HIGH SPEED SESSION MANAGEMENT[™] system to advance the efficiency of its well-known TECHNOLAS Excimer Workstation 217P. HIGH SPEED SESSION MANAGEMENT – including TECHNOLAS Premium LASIK treatments and SUPRACOR for presbyopia – provides ophthalmologists with a unique chance to develop their practice without major hardware investment.

HIGH SPEED SESSION MANAGEMENT uses intelligent workflow management and intuitive user interfaces for easier and faster handling of the TECHNOLAS Excimer Workstation 217P – already well known for its reliable results and consistent performance. At the heart of the system is the portable TECHNOLAS Pad, a high performance tablet computer incorporating the powerful ZYOPTIX[®] Treatment Calculator, which manages and stores key patient information in a paperless workflow from diagnosis to treatment. The pad docks directly onto the 217P laser, allowing last minute adjustments before surgery directly at the laser.

The well-known TECHNOLAS Premium LASIK treatments allow ophthalmologists to offer patients the highest vision quality with reduced retreatment rates. HIGH SPEED SESSION MANAGEMENT also includes the new CE-approved SUPRACOR treatment for presbyopia. SUPRACOR is a true bilateral excimer presbyopia treatment where both eyes can be treated with equivalent profiles. It provides excellent near, intermediate, and distance vision for patients, and allows doctors to expand their excimer practice to include the rapidly growing presbyopia market.

HIGH SPEED SESSION MANAGEMENT, SUPRACOR, and the TECHNOLAS Excimer Workstation 217P allow ophthalmologists to develop their practice by continuing to offer patients trusted laser vision solutions as they age. Technolas Perfect Vision is the ideal partner for ophthalmologists wishing to achieve higher efficiency and access a wider market without investing in a new laser.

About Technolas Perfect Vision GmbH

Technolas Perfect Vision GmbH (TPV) is a leading ophthalmology laser company, formed through a joint venture between Bausch +Lomb, and 20/10 Perfect Vision AG. TPV has a full range of expertise in both femtosecond and excimer businesses. Current innovations focus on laser cataract surgery and the correction of presbyopia with the SUPRACOR[™] and INTRACOR[®] laser treatments.
